

AccuTemp PAB-200

Fully Automated Post Apply Baking System

Application: Highly uniform / profilable photomask post apply baking system

In Brief: By providing a multizone heater array with **Thermal Sink** capability a highly dynamic thermal environment can be created. The system can be programmed to offset thermal budgeting issues within the mask. The system can be programmed to provide a highly uniform temperature profile or a gradient to compensate for other process variables

AccuTemp - 110degC-Heater & 23degC-Cooler

Features and Benefits

Feature	Benefit
Dynamic Temperature Control	<ul style="list-style-type: none"> Thermal sink capability improves process control by placing constant load on heat array allowing better control/uniformity
Multizone Design	<ul style="list-style-type: none"> Compensate for variations in heating pattern density Increased temperature uniformity Temperature profile capability
Integrated Cool Plate	<ul style="list-style-type: none"> Reduced Footprint
